

Lab 34 Worksheet — Linux Command Line Essentials on Killercoda

Name: ____ Date: ____

Exam objective: Use the Linux commands named in Core 2 objective 1.11 for navigation, file management, searching, process control and package management (Core 2 objective 1.11).

Record as you go

Step	What you did	What you observed
1	Open https://killercoda.com/playgrounds/scenario/ubuntu and wait for the terminal. Confirm where you are and who you are running as.	
2	Install the packages this lab uses and note that apt is the package manager on Debian and Ubuntu.	
3	Create a working directory tree and confirm its structure visually.	
4	Create files with content so the later commands have real data to operate on.	
5	List files with the long format showing permissions, ownership, size and modification time, including hidden files.	
6	Display file contents with cat, then page through a longer file with less to see how each is used.	
7	Search file contents with grep, which is the command you use to find an error in a log.	
8	Find files by name and by type across a directory tree.	
9	Copy, move and rename files, then confirm the result of each operation.	

Step	What you did	What you observed
10	Check storage and memory usage, which are the first two things to check on a Linux machine reported as slow.	
11	List running processes and identify the top consumers, then record how you would terminate a runaway process.	
12	Change file permissions and ownership, then verify both, and record the numeric meaning of the mode you set.	

Verification

Success criterion: Every command runs without error on the playground; grep returns exactly two ERROR lines from the log; ls -l confirms the 640 permission as rw-r-----; and your reference records real output for each command rather than expected output.

- I completed every step in the lab.
- My result meets the success criterion above.
- I recorded my evidence (screenshots, output, completed tables).

Reflection

What surprised you in this lab?

Where would you apply this on the job?

What do you still need to revise before the exam?
