

Lab 4 Worksheet — MDM Policy Design and Mobile Synchronisation

Name: ____ Date: ____

Exam objective: Design a mobile device management policy and configure account synchronisation for corporate email, calendar and contacts, accounting for data caps (Core 1 objective 1.4).

Record as you go

Step	What you did	What you observed
1	List the eight MDM control areas your policy must cover: device enrolment, screen lock, encryption, corporate email profile, two-factor authentication, application whitelisting, remote wipe and location services.	
2	For each control area, write the specific rule your policy enforces and one sentence on the risk it mitigates.	
3	Distinguish MDM from MAM in your policy: MDM controls the whole device, while MAM controls only the corporate applications and data on it.	
4	Write the BYOD section covering what the organisation may and may not wipe on a personally owned device, and why a full remote wipe is inappropriate there.	
5	On the device, add a Microsoft 365 or Google Workspace account and select which data types to synchronise: mail, calendar, contacts and photos.	
6	Verify synchronisation by creating a calendar entry on the device and confirming it appears in the web client within one minute.	
7	Open the device's data usage screen and record the current billing-period total and the configured	

Step	What you did	What you observed
	data cap or warning threshold.	
8	Estimate the size of a full photo library sync, then calculate what percentage of a 5 GB monthly cap it would consume and state whether it should run on cellular.	
9	Configure the account to synchronise photos on Wi-Fi only, and record the exact setting path so it can be included in a user guide.	
10	Write the user-facing section of the guide: how to enrol, what the organisation can see, and what to do if the device is lost or stolen.	

Verification

Success criterion: Your policy covers all eight control areas with a rule and a risk for each, clearly separates MDM from MAM and corporate from BYOD, synchronisation is verified end to end within one minute, and the data-cap calculation supports a stated Wi-Fi-only recommendation.

- I completed every step in the lab.
- My result meets the success criterion above.
- I recorded my evidence (screenshots, output, completed tables).

Reflection

What surprised you in this lab?

Where would you apply this on the job?

What do you still need to revise before the exam?
